Objective

Aspiring Data Scientist and ML Engineer pursuing B.Tech in AI & Data Science at Lovely Professional University, seeking a software engineering or data science internship at Google. Passionate about building intelligent systems, scalable data pipelines, and machine learning solutions from first principles. Eager to contribute to Google's mission of organizing the world's information through data-driven innovation.

Education

Lovely Professional University (LPU)

B.Tech in Computer Science – Specialization: Data Science & Machine Learning, AI

Phagwara, Punjab, India

Aug 2025 – Jul 2029

Shemford Group of Schools

Higher Secondary Education (Class XII)

India

Apr 2014 – Mar 2025

Technical Skills

Languages: Python, SQL, C (basics)

ML / Data Science: Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn

Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Power BI, Google Colab

Concepts: Machine Learning (regression, classification, clustering, recommendation systems), EDA, Data Cleaning, Feature Engineering, NLP (basics), Computer Vision (basics), Prompt Engineering, DAX

Soft Skills: Analytical thinking, algorithmic problem solving, self-directed learning, documentation

Projects

Credit Card Transaction EDA & Customer Segmentation | *Python, Pandas, NumPy, Matplotlib* **2025**

- Performed end-to-end Exploratory Data Analysis (EDA) on a real-world dataset of 10,000+ credit card transactions.
- Uncovered key spending patterns, repayment behaviors, and customer segments using statistical analysis and custom visualizations.
- Engineered features to identify high-risk customers and spending anomalies, simulating use cases relevant to Google Pay fraud detection.
- Delivered insights structured as a data report with actionable business conclusions.

Recommendation Engine & Data Cleaning Pipeline | *Core Python (no external libraries)* **2025**

- Built a complete recommendation engine from scratch using only built-in Python — no NumPy, Pandas, or Scikit-learn.
- Implemented similarity-based recommendation logic (cosine similarity computed manually) achieving high relevance scores on test cases.
- Designed a modular data cleaning pipeline capable of handling missing values, duplicates, and inconsistent formatting in messy datasets.
- Strengthened core algorithmic thinking and understanding of underlying ML mechanics — directly applicable to Google-scale system design.

Certifications

Pandas | *Kaggle* **2025**

Generative AI Foundations | *upGrad / Microsoft* **2025**

- Covered large language models, prompt engineering, and responsible AI — aligned with Google DeepMind's research areas.

Advanced Power BI Workshop | *LPU* **2025**

Areas of Interest

Machine Learning Algorithms (regression, clustering, recommendation systems) · MLOps & Scalable Data Pipelines · Natural Language Processing · Computer Vision · Large Language Models & Generative AI · Data-Driven Product Development

Additional Information

Open to: Data Science / ML Internships, Research Collaborations, Remote & India-based roles

Philosophy: Codes from first principles; prefers understanding over abstraction — directly applicable to Google's engineering culture of depth and scalability.
